## PA200 & 500 MKII Altimeter Echogram Display Using the Genesis Software Suite

### Tritech Announce New Features for the Precision Altimeter MKII

With the release of the latest Tritech Genesis Software v1.10.5 customers can now utilise the Echogram display feature available on the recently launched PA500 and PA200 MKII Altimeters.

This feature is available in Genesis v1.10.5 onwards and utilises the MKII Altimeter Firmware revision v11 and up. On connection to Genesis and adding as a MKII Altimeter device Genesis automatically detects the version of firmware loaded onto the MKII Altimeter and will prompt to update from previous versions.

As well as Echogram functionality available through Genesis, the latest firmware update also benefits from improvements to the depth tracking, acoustic performance and smoothing algorithms giving improved performance in stand-alone operation.

Although customers may not use the Echogram functionality, Tritech strongly suggest all customers should update the firmware to the latest version to take advantage of the improvements in functionality and performance. As Tritech continues to develop the functionality and refine the operation of this and other products, further updates to the internal firmware will be released as part of the Genesis release cycle.

Full details of the Altimeter, its connection to, and operation in Genesis can be found in Altimeter MKII Hardware Manual and Genesis Software Manual available from the Support Resources page of the Tritech website [www.Tritech.co.uk](http://www.Tritech.co.uk). For further technical assistance on this or any other Tritech product please contact our support group by email at [support@tritech.co.uk](mailto:support@tritech.co.uk) or by phone on +44 (0)1224 744111.
